

## Seeing Our Solar Industry in a New Light

For the first time, Calgary hosted the Solar Canada Conference & Exposition, Canada's largest solar event. This is a fitting change, seeing as western Canada is quickly emerging as the hottest solar market in the nation.

The Cachelan team was thrilled to attend this annual event for another year, as we always enjoy connecting with our clients and industry colleagues, learning about new innovations, and keeping up with Canada's solar energy conversation.

### Sunny Skies Ahead

The conference boasted close to 1,800 registrants hailing from western Canada and all across the nation, reflective of the **brewing national interest in solar energy and its growth.**

Although Solar Energy as an industry currently only comprises a small part of the Alberta electricity grid, there is no denying that its popularity is on the rise. As it currently stands, the Alberta Electricity System Operator holds a **hefty portfolio plan** consisting of **4,000+ mW worth of solar projects** that are going through the permitting process -

"As a nation, we are seeking new markets for our enormous traditional energy reserves while rapidly expanding cleantech innovation and development" - John Gorman, president and CEO of the Canadian Solar Industries Association. [Image: CanSIA]

Cachelan works hard to make sure the your transition into our new energy climate is a smooth one. Contact us to learn about how we can help you, with services like a custom NRGpilot portal for monitoring energy generation, power usage, lifetime performance reports, fault alarms, and more!
